Customer Reviews

As an author of books on women's health, I often have to inform women that exercise has ruined

their health, or at least has the potential to. So many people do exercise improperly or excessively that it scares me. Down time is important. Recovery is important. Re-fueling is important. And if you want to be the healthiest and the baddest of athletes, then serious science is important, too. Research. Help. Planning. Fortunately, Ben Greenfield has done all of this for us. I recommend almost no fitness books to my female audience. But this one is SO FULL of attentive detail to just about every exercise and health related hack I cannot help but recommend it. I even recommend it to people who are not athletes because it contains such a plethora of information on how the human body works. Take, for example, problems with adrenal fatigue and mineral imbalances. Ben addresses insomnia in the book (of course) and two of the problems he addresses that cause insomnia are mineral imbalances and overtraining or stress. This is always the first section of books I flip to because I know these issues like the back of my hand. Ben nails the symptoms of the problems -- heart racing, pulse beating in your ears and throat, tired and wired feeling at night and during the day -- of adrenal and mineral related insomnia. I come across few health gurus who know the adrenal system so well, and for that I have nothing but profound gratitude for Ben and his work. As well as just about a million other facts in the book and a million other attributes of it -- great clarity, profound research, insights and thoughtfulness from Ben.
